

FICTIONAL SAMPLE / PRIVATE BETA

Bywater Grounds

Coffee House

Representative lender-ready business plan

SBA 7(a) funding request | \$285,000

Prepared July 2026

This made-up business and every figure in this document exist only to demonstrate the expected structure and formatting. No external research or customer data was used.

Important sample notice

Bywater Grounds Coffee House is entirely fictional. This representative sample demonstrates document structure and formatting only. All facts, assumptions, and financial figures below were invented for the sample; they are not based on external research and should not be used for a real financing decision.

Executive Summary

Bywater Grounds Coffee House is a fictional 2,100-square-foot neighborhood coffee shop planned for New Orleans, Louisiana. The concept combines a specialty beverage program, a focused food menu, and community events in a 50-seat location. The business is shown seeking a **\$285,000 SBA 7(a) loan** alongside a **\$57,000 owner contribution** to fund build-out, equipment, opening inventory, and working capital.

The sample operating model targets a six-month build-out and launch period. Revenue is assumed to grow from **\$22,000 in month one** to **\$46,000 in month twelve**, supported by increasing daily transactions, an \$8.40 blended average ticket, and later additions from catering and wholesale cold brew. The fictional plan estimates monthly operating break-even at approximately **\$31,500 in revenue**.

The primary risks are permitting delay, a slower-than-planned customer ramp, summer seasonality, and owner dependency. The plan addresses those risks with a six-month working-capital reserve, phased hiring, documented operating procedures, and a focus on one location until the model is stable.

Company and Funding Request

Business overview

Bywater Grounds is presented as a single-member Louisiana LLC operated by an owner with prior specialty-coffee management experience. The business would serve neighborhood residents, remote workers, and visitors through counter service, online pickup, small-event bookings, and local catering.

Sources and uses

Source	Amount
Owner contribution	\$57,000
SBA 7(a) loan	\$285,000
Total project funding	\$342,000

Planned use	Amount
Leasehold improvements	\$128,000
Equipment and fixtures	\$94,000
Opening inventory and smallwares	\$18,000
Pre-opening payroll and marketing	\$22,500
Working-capital reserve	\$62,000
Contingency	\$17,500
Total uses	\$342,000

Customer and Offer

Intended customer

The primary fictional customer is a nearby resident or remote worker who wants a reliable neighborhood coffee shop with seating and consistent morning service. Secondary customers include visitors staying nearby, small offices ordering catering, and community groups booking events.

Offer and revenue mix

The core offer includes espresso drinks, brewed coffee, pastries, a small lunch menu, retail coffee, and ticketed classes. Catering and wholesale cold brew are phased in after the retail operation is stable.

Revenue line	Illustrative mature mix
Beverages	58%
Food	22%
Retail beans and merchandise	9%
Catering	6%
Wholesale cold brew	3%
Events	2%

Operations and Milestones

The fictional location operates daily from 6:30 a.m. to 6:00 p.m. with an owner-operator, five part-time baristas, and outsourced bookkeeping. A shift lead is added after the initial ramp; an assistant manager is deferred until the second year.

First-year milestones

Milestone	Target
Complete build-out and permits	Within six months of funding
Reach monthly operating break-even	Month seven after opening
Reach 320 daily transactions	Month twelve
Reach \$46,000 monthly revenue	Month twelve
Establish wholesale accounts	Two by month twelve

Financial Plan

Revenue ramp

Month	Revenue
1	\$22,000
3	\$31,000
6	\$37,500
9	\$42,500
12	\$46,000

The sample assumes that transaction volume grows as local awareness and repeat visits increase. It also assumes a stable blended average ticket and does not treat catering or wholesale as material revenue until later in the first year.

Cost assumptions

Direct product costs are modeled at 30%–33% of revenue. Labor is targeted at 28%–32% of revenue once staffing reaches the planned level. Illustrative fixed monthly obligations include \$4,800 in rent, \$1,450 in utilities and related occupancy costs, and approximately \$3,300 in debt service.

Break-even narrative

The fictional model estimates operating break-even near \$31,500 in monthly revenue. This estimate depends on the assumed contribution margin, staffing schedule, and fixed-cost figures. A real applicant should replace every figure with documented quotes, current lender terms, and projections reviewed by a qualified financial professional.

Risk Review

Automated credibility notes

Connected assumptions: The funding request equals the listed project uses, and the owner contribution plus proposed loan equals total project funding.

Items requiring evidence: Lease terms, contractor bids, equipment quotes, lending rate, customer traffic assumptions, and owner experience would need supporting documentation in a real application.

Sensitivity to test: A slower customer ramp or higher build-out cost could consume the working-capital reserve earlier than planned. The owner should model downside cases before submitting a financing package.

Final Review Responsibility

This sample was created with an AI-assisted drafting workflow and was not reviewed by a human accountant, attorney, lender, or industry specialist. It provides no legal, tax, accounting, investment, or lending advice and does not guarantee financing. A real business owner is responsible for checking all content before sharing a plan.
